

The Professional's Guide to Increasing Productivity Using Legend Brands Cleaning Systems

This guide will help you increase your productivity by showing how to adapt your cleaning chemistry to the soil load in the carpet fiber, upholstery, and tile and grout.

By increasing productivity you become more profitable on each and every job.

As with any cleaning, you should always pretest your products on an inconspicuous area of the items being cleaned.

FOR THE MOST COMPLETE CLEANING, ALWAYS FOLLOW THESE STEPS:

- **Pre-inspect** all areas to be cleaned and communicate with the customer
- **Prespray** areas to be cleaned
- **Agitate prespray** into surface (the use of an electrical agitation device such as the Procaps Low-Moisture Cleaning Machine will increase the amount of suspended soil)
- **Extract, neutralize and rinse** all areas
